Press Release

12 May 2022, Male'

MTCC awarded The Design & Build of Sh. Maaungoodhoo Harbor Project

MTCC has been contracted towards implementation of The Design & Build of Sh. Maaungoodhoo Harbor Project. The client is the Ministry of National Planning, Housing, and Infrastructure of the Government of Maldives. In a ceremony held today, CEO Adam Azim signed on behalf of MTCC and Ms. Zeeniya Ahmed Hameed, Permanent Secretary signed on behalf of the Ministry.

With a population of 1,155, fishing is one of the key economic activities on the island. However, the current harbor size is not adequate for the vessels owned by Maaungoodhoo residents. The harbor still has remains of the old harbor, which is in poor condition and therefore needs to be replaced and redeveloped. It is the hope of islanders that the new harbor will provide their vessels with the required space and protection. Once completed, the new harbor will help to create further opportunities for socio-economic growth within the island.

Scope of works for the project include harbor dredging operations of 59,013cbm, channel dredging operations of 3,245m, construction of a 362m breakwater, a 105m revetment, a 312m quay wall, a ramp, a concrete jetty, installation of mooring buoys, installation of 1,509sqm harbor pavement and installation of navigational aids. Once completed the harbor will have increased its size by double and the newly built ramp will also give access to landing crafts to alongside and unload/load goods with ease. The new concrete jetty will also give plenty of space for additional vessels to dock alongside and provide easy maneuverability inside the harbor. An Environmental Impact Assessment (EIA) will be conducted as it is part of the project scope. It is noteworthy that the process of EIA is completed with the involvement of all the stakeholders involved. Therefore, it is essential to conduct the EIA efficiently. With the completion of EIA, all mitigating factors will be taken into consideration and the project will be implemented with the engineering solutions. The value of the project is MVR 59,713,156.38 million and the project is to be completed within 475 days.

Over the past 41 years, MTCC has delivered various harbor development projects successfully in multiple locations of the Maldives. We have developed our own mobilization techniques and operational procedures to suit the unique environmental and logistical challenges faced in carrying out harbor development projects in the dispersed islands of the Maldives. As an important partner in nation building, we have gained nationwide trust and recognition for our capacity and expertise in the area.
